CAN LINER GUIDE

THE ONLY TRASH TALK YOU'LL EVER GET FROM US

Right person, right job, right team. Those are the things that we look for in a new employee. When it's a trash can liner, it's right liner, right size, right application. Those items that are simply "paper trash" a thin liner works fine. However, if you put items that can spill in such a bag, you'll probably create a big mess. Also, you don't need a 50" bag for a 19" application.

This is an area that we find savings in just about every evaluation that we do.

Let WJ Office help you save money with a smaller bag and suggest one that is the right type of can liner, for the right purpose, and the right size.

Sourcing can liners during the pandemic became a serious problem. Fortunately, as the supply chain eased a bit and more resin became available, prices declined and we were able to catch up on orders. Let us do an evaluation of your trash and your can liners to recommend the right ones for you.

Low-density trash bags are thick, flexible and highly resistant to puncturing and tearing. They are ideal for kitchen trash, construction debris or trash that includes glass, metal, wood, cardboard or other sharp, jagged or irregular shaped items. Their durability make them a great choice for kitchen and outdoor trash cans, as well as wheeled trash cans. When you need tough bags, low density is the best choice. For thinner, more economical bags, see high-density plastic bags below.

HIGH DENSITY		container size	case	\$
item #	description	(gallons)	qty	price
CLHD242408NR	24"X24" HIGH DENSITY NATURAL 8-MICRON CAN LINER	7 – 10	1000	\$24.49
CLHD243308C	24"X33" CLEAR 8-MICRON CAN LINER	12-16	250	\$39.49

High-density trash bags have a different manufacturing process than low-density trash bags, making them thinner and not as puncture resistant. However, they can still carry very heavy loads that are not rough-edged such as clothing, towels and dirt. High-density bags are a great choice for office and restroom waste, shredded paper and in public areas where sharp trash is not deposited. They easily identified by their clear appearance and crinkly feel. Because they use less plastic, high-density bags are generally less expensive than low-density variations, providing a cost-effective solution.

HD = High Density. LD = Low Density. Mil and Micron indicate thickness. Container Size denotes gallons.
